Anja Delic

anjadelic2@gmail.com | github | linkedin | scholar

Summary

PhD student in computer vision with experience in anomaly detection, image segmentation, generative modeling and human motion estimation. Published at ICCV and BMVC.

Education

University of Zagreb Faculty of Electrical Engineering and Computing *Zagreb, Croatia*

- **PhD in Computer Vision** **Sep 2023 - ongoing**
  Topic: Probabilistic anomaly detection based on deep models for image segmentation and human pose sequence modeling.
- **Master of Computer Science** **Sep 2021 - Jul 2023**
  Graduated cum laude. Thesis: Dense anomaly detection with generative models.
- **Bachelor of Computer Science** **Sep 2018 - Jul 2021**

Publications

• Anja Delić, Matej Grcić and Siniša Šegvić, *"Sequential keypoint density estimator: an overlooked baseline of skeleton-based video anomaly detection"*, **ICCV 2025 Highlight paper**.

• Anja Delić, Matej Grcić and Siniša Šegvić, *"Outlier detection by ensembling uncertainty with negative objectness"*, **BMVC 2024 Oral presentation**.

• Anja Delić, Jurica Runtas, Marin Oršić, Ivan Marković, Ivan Petrović, *"SAFe: Segment-guided Aggregation of Feature Densities for Anomaly-aware Segmentation"*, 2026, Arxiv preprint.

Experience

University of Zagreb Faculty of Electrical Engineering and Computing *Zagreb, Croatia*

Researcher at Laboratory for Autonomous Systems and Mobile Robotics **Dec 2025 - ongoing**

- Research areas: human motion analysis, 3D human pose estimation and tracking in videos, human intent estimation, diffusion models, autoregressive models.
- Ongoing project: a realistic video benchmark for multi-sensor semantic segmentation in the open-world.

Researcher at Computer Vision Group **Jul 2023 - Dec 2025**

- Research areas: anomaly detection, object tracking, mask-level dense recognition, normalizing flows, diffusion models, GANs, autoregressive models, vision foundation models.
- Holding SOTA results on renowned benchmarks Fishyscapes and SegmentMeIfYouCan for 2+ years.
- Teaching: deep learning, computer vision, 3D computer vision; co-mentored graduate students.

AVL *Zagreb, Croatia*

Data scientist - Full time **Oct 2021 - Jul 2023**

- Worked on an R&D project for electric vehicle range prediction. Participated in the whole solution delivering pipeline: data preparation, data engineering, data science & ML solutions, interpretation, and sales.

2e Systems *Zagreb, Croatia*

Software developer - Intern **Jan 2021 - Oct 2021**

- Developed back-end solutions used in applications for planning and analysing in the aviation industry.

Awards & Accomplishments

Winner of the challenge "Uncertainty in Open-World Robotics" at ICRA 2026

Method for open-world road-driving scene segmentation using foundation and generative models.

Winner of the challenge "Robust Recognition in the Open World" at BMVC 2024

Method for detecting and tracking anomalies in videos by coupling anomaly detectors with foundation models.

Relevant skills

Programming Languages	Python (expert) | C++ (advanced) | Java (advanced) | MATLAB (intermediate)
Relevant technologies	ML/DL Libraries: NumPy, PyTorch
Generative Modeling	Diffusion models, autoregressive models, normalizing flows, VAEs, GANs
3D & Graphics	3D pose estimation, point clouds, volumetric representations
